

Application presentation

A mobile experience for understanding entitlements and exploring a proposed care journey.

PRESENTATION BRIEF • OCTOBER 2026

Illustrative visual. Demonstrations available; deployment subject to local agreements and authorizations.

CITIZENS AND PARTNERS

Screens and intended uses

Home and coverage

The mobile showcase includes sample home, health card and coverage screens. Displayed information is illustrative; actual entitlements will be set by the partner program.

Providers and appointments

The proposed journey supports access to provider information and care coordination. Network and appointment availability will depend on local agreements, provider verification and connected systems.

Notifications and support

The demonstration includes notifications and a support area. Channels, response times and responsibilities must be agreed with the local operator.

French and English

Visitors can select French or English and retain that preference on later visits when browser storage is available. Public documents are separated by language.

CITIZENS AND PARTNERS

The citizen journey, step by step

Enrollment and verification

The future program will define required information, consent, eligibility and identity checks. Demonstrations support discussion of these steps without real patient records.

Care access and guidance

Citizens explore the services envisaged in their program. Automated guidance is informational support, not a diagnosis. Emergencies require local emergency services.

Prescription and dispensing

A demonstration scenario connects providers and pharmacies using dual-key one-time-code validation. Medical rules, SMS delivery and exception handling must be validated before operation.

Payment and follow-up

Simulations illustrate contributions, reimbursements and claim progress. Demonstration screens do not guarantee real payments or effective insurance coverage.

CITIZENS AND PARTNERS

Inclusive, responsible access

Mobile, web and simplified access

The mobile web showcase is publicly available. Native iOS/Android distribution and USSD access are deployment options; app store publication, telecom availability and short codes remain subject to partner confirmation.

Protection and trust

A pilot must define permissions, data minimization, retention, hosting, audit logging and incident procedures. This document does not claim regulatory approval or compliance certification.

Before any launch

Validate local languages and needs, test accessibility and connectivity, train teams and run a governed pilot. Active features will depend on the contractual and regulatory scope.
